COOPERATIVE INSTITUTIONAL RESEARCH PROGRAM at the HIGHER EDUCATION RESEARCH INSTITUTE AT UCLA

How to Read the Institutional Profile Report

This DLE Institutional Profile provides valuable information on your students' perceptions and experiences of the campus climate for diversity at your institution and two comparison groups. This report provides information that can be used for student assessment activities, and self-study reports, campus planning, and policy analysis. Separate profile reports are generated for full-time respondents based on class standing (four-year institutions) or units completed (two-year institutions).

Comp 1 – Based on your institution's type (university or four-year college).

Comp 2 – Based on your institution's control (public or private)

Factor – Items that are included in the measurement of a factor are indicated here.

Mean – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 4=Essential, 3=Very Important, 2=Somewhat Important, 1=Not Important).

Statistical significance – Uses t-test to examine the difference between the mean score for your institution and the comparison group. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (*p< .05, **p< .01, and ***p< .001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is important. Large sample sizes (like those in the comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.

Effect size – Determines the practical significance of the mean difference between your institution and the comparison group. It is calculated by dividing the mean difference by the standard deviation of the comparison group. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign indicates that your institution's mean is greater than the mean of the comparison group; a negative sign indicates your mean is smaller than the mean of the comparison group. Note that a negative effect size is sometimes preferred (e.g., a negative effect size on "Since entering college, how often have you missed class due to personal/family responsibilities" suggests fewer students at your institution reported this was the case).

Standard deviation – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread over a larger range of response options.

How to Read the Module Reports

This DLE module report provides valuable information on how your students navigate higher education and experience the academic environment at your institution and with other institutions who also administered the same module. Module reports are generated for all full-time respondents.

Sample University	Total		Men		Women	
	Your Inst	All	Your Inst	All	Your Inst	All
How often in the past year have you:						
Avoided using language that reinforces negative stereotypes						
Very often	9.2%	6.3%	12.5%	6.8%	7.8%	6.1%
Often	24.8%	20.2%	28.1%	19.9%	23.4%	20.3%
Sometimes	35.8%	34.3%	28.1%	30.7%	39.0%	36.1%
Seldom	23.9%	29.3%	21.9%	31.0%	24.7%	28.5%
Never	6.4%	9.9%	9.4%	11.6%	5.2%	9.1%
Total (n)	109	3,130	32	815	77	2,315
Mean	3.06	2.84	3.13	2.79	3.04	2.86
Standard deviation	1.06	1.06	1.18	1.10	1.01	1.04
Significance	-	*	-		-	
Effect size	-	0.21	-	0.31	-	0.17

All – The comparison group is based on all institutions who administered the same module.

Mean – The arithmetic mean is computed for each survey item based on the response options. Response options are given numeric values and are listed in descending order (i.e., 4=Strongly agree, 3=Agree, 2=Disagree, 1=Strongly disagree).

Standard deviation – Measures the variability around the mean. A small standard deviation indicates that the responses to the item tend to be very close to the mean, whereas a large standard deviation indicates that the responses are spread over a larger range of response options.

Effect size – Determines the practical significance of the mean difference between your institution and the comparison group. It is calculated by dividing the mean difference by the standard deviation of the comparison group. Generally, an effect size of .2 is considered small, .5 medium, and .8 large. A positive sign indicates that your institution's mean is greater than the mean of the comparison group; a negative sign indicates your mean is smaller than the mean of the comparison group. Note that a negative effect size is sometimes preferred (e.g., a negative effect size on "Since entering this college, how often have you missed class due to personal/family responsibilities" suggests fewer students at your institution reported this was the case).

Statistical significance – Uses t-test to examine the difference between the mean score for your institution and the comparison group. Items with mean differences that are larger than would be expected by chance are noted with one, two, or three stars, which correspond to the three standard levels of significance (*p< .05, **p< .01, and ***p< .001). Statistical significance measures the extent to which a difference is occurring by chance, not the extent to which a difference is important. Large sample sizes (like those in the comparison groups) tend to generate statistical significance even though the magnitude of the difference may be small and not practically significant. In order to provide additional context to statistical significance, effect sizes are provided.
